Drill Braces.

This is a ten inch sweep Ratchet Brace, with Gear Wheels speeded about three to one, to be used for drilling. When not needed, the Gear Wheel can be removed in one second, leaving a ratchet brace. This Brace is made of steel, and is heavily Nickel Plated, with Rosewood handle and Lignum-vitæ head. The jaws are of forged steel, and will center and hold firmly round twist drills from 1-8th to 7-16ths of an inch in diameter. Also square shank Bits and Drills of all sizes. Also square and flat Screw-driver Bits. In fact, it will hold, perfectly, tool shanks of any size or shape.

With each Drill Brace we send an extra set of Forged Steel Jaws, mainly to be used for holding round twist drills less than one-eighth of an inch in diameter. As will be noticed in the cut, the large gear wheel has an extension handle to give it more power when needed.

Price of Drill Brace complete, per dozen,

\$ 36 00

Patent Improved Angular Borers.

No. 21.

No. 22.

This implement is of incalculable value for boring where the ordinary brace cannot be used, in all places where there is not room for the regular brace handle to turn; and can be used for boring in corners, against partitions, along-side of walls, between beams, around projections, shelves, etc., and is therefore a tool peculiarly suited to the use of gas-fitters, plumbers, bell-hangers, carpenters, and for agricultural work, etc.

The Socket for holding the Bit is the same as in ordinary Brace.

No. 21, per dozen,

\$ 24 00

No. 22, with Set Screw, per dozen,

Robinson's Crank Wrench and Bit Braces.

Under separate patents are three improvements, which give to this Wrench the following advantages over any other:

The tool is here seen as a WRENCH, a CLAMP, and a HAND-VICE.

POLISHED.

The old style of wrenches have to be removed and readjusted to a nut at every half turn they make. In this one the thumb-nut grips the jaws to the object to be turned, and by means of the crank handle the work is speedily done before the wrench is removed. For oiling buggies and wagons this wrench has no equal. It does the work very quickly and you never need touch the axle-nut with your hands or gloves. In all other places it is equally handy, and greatly saves time and labor. This brace-arm fits into the wrench handle to make the bit brace.

No. 0 are loose; No. 00, half dozen in a box; Nos. 1 and 2, one dozen.

Adjustable Plumb Bobs.

These Plumb Bobs are constructed with a reel at the upper end, upon which the line may be kept; and by dropping the bob with a slight jerk, while the reel is held in the hand, any desired length of line may be reeled off. A spring, which has its bearing on the reel, will check and hold the bob firmly at any point on the line. The pressure of the spring may be increased or decreased by means of the screw which passes through the reel. A suitable length of line comes already reeled on each Plumb Bob.

Polished Trimmings, each, \$ 1 50

Improved Adjustable Circular Plane.

No. 113, Adjustable Circular Plane, $1\frac{3}{4}$ inch Cutter, each, \$ 4 00

This Plane has a Flexible Steel Face, which can be easily shaped to any required arc, either concave or convex, by turning the Knob on the front of the Plane. The Knob is attached to a double-acting screw, which moves two levers properly connected by gears, thus controlling accurately both ends of the flexible face. By the peculiar construction of the Plane, a smaller arc, either concave or convex, can be obtained by this Plane than any other similar tool.

No. 13, Circular Plane, $1\frac{3}{4}$ inch Cutter, each, \$ 4 00

This Plane has a Flexible Steel Face, and by means of the thumb screws at each end of the Stock can be easily adapted to plane circular work—either concave or convex.

Orders for Plane Irons should designate the No. of the Planes for which they are wanted.

Traut's Patent Adjustable Dado, Filletster, Plow, Etc.

The Tool here represented consists of two Sections: A main stock, with two bars or arms; and a sliding section, having its bottom, or face, level with that of the main stock.

It can be used as a Dado of any required width, by inserting the bit into the main stock and bringing the sliding section snugly up to the edge of the bit. The two spurs, one on each section of the Plane, will thus be brought exactly in front of the edges of the bit. The gauge on the sliding section will regulate the depth to which the tool will cut.

The Tool is accompanied by eight Plow-bits ($\frac{3}{16}$, $\frac{1}{4}$, $\frac{5}{16}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{7}{8}$ and $1\frac{1}{2}$ inch), a Filletster Cutter, a Slitting-tool and a Tonguing-tool. All these tools are secured in the main stock on a skew.

PRICE, INCLUDING PLOW BITS, SLITTING AND TONGUING TOOLS.

No. 46, Iron Stock and Fence, each, \$ 7 00

Miller's Patent Combined Plow, Filletster,
and Matching Plane.

This Tool embraces, in a most ingenious and successful combination, the common Carpenter's Plow, an adjustable Filletster and a perfect Matching Plane. The entire assortment can be kept in smaller space or made more portable than an ordinary Carpenter's Plow.

The above engraving represents the stock of the Tool, adjusted for use as a Plow. With each plow eight bits ($\frac{1}{8}$, $\frac{3}{16}$, $\frac{1}{4}$, $\frac{5}{16}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$ and $\frac{3}{4}$ inch) are furnished; also a Tonguing Tool ($\frac{1}{4}$ inch), and by use of the latter, together with the $\frac{1}{4}$ -inch Plow Bit for grooving, a perfect Matching Plane is made.

The above in one-third dozen boxes.

Disston's Skew Back Saws.

D-8 Hand Saw.

This Saw has all the latest improvements in Hand Saws, and is warranted superior to all others.

It combines the popular "Skew Back," the peculiar shaped Butt or Heel, which, with the new screws, makes it almost impossible to work loose from the handle, and gives the full sweep of the saw without a possibility of catching in the work.

All the above features are patented.

Per dozen, 26 in., \$22.50 ; 28 in., \$26.00.

New Langdon Miter Box Improved.

Ordinary Miter Boxes cut from right angles to 45 degrees, inclusive, as shown on the diagram, A, B, C.

The New Langdon Improved cuts, by using the circular arms or guides, from right angles to 73 degrees on $2\frac{1}{2}$ inch stuff, as shown on diagram, A, B, D; varying more or less with width of stuff.

The only box adjustable for mitering circular work in patterns, emery wheels and segments of various kinds.

Size 1. (New Langdon.)

Gives 6 inches width at right angles, and 4 inches at miter. Weight with saw, 25 pounds.

Size 2. (New Langdon.)

Gives 9 inches width at right angles, and $6\frac{1}{2}$ inches at miter. Weight with saw, 26 pounds.

Size $2\frac{1}{2}$. (New Langdon.)

Gives same width as size 2, and are arranged for saw 28 inches by 5.

Saws 22, 24 and 26 inches long are most approved by users of sizes 1 and 2.

The parts of each size interchange.

To prevent pricking the thumb by the saw teeth in raising the stop lever, we have the butts of our saws rounded. Saws are measured by the *length of the blade*, not of the teeth.

Blades for 8-inch side-cutting Plier, each,	20
Half dozen in a box.	

Carew's Patent Wire Cutter.

These goods have recently been greatly improved. They are now made throughout of FORGED STEEL.

The advantage of this cutter over others now in use can be seen at a glance. The adjustable jaws are its main feature. These are made of the best tool steel, and are brought to a keen cutting edge before being tempered. The cutting quality is unsurpassed. Whenever they become dulled by use, they can easily be removed, by driving from the end showing prick-mark; ground, and as easily replaced. This may be repeated as often as expedient; or they can be replaced by duplicate jaws; thus obviating the necessity of purchasing new cutters.

Five Sizes.

Pennsylvania Lawn Mower.

SURPASSING ALL OTHERS AND PRONOUNCED "THE BEST."

The PENNSYLVANIA LAWN MOWER stands to-day at the head of the List of Lawn Mowers in the United States.

Light draft and easily adjusted.
 It is less liable to obstruction in either high or low grass.
 Lightness combined with strength in construction.
 It cuts the grass more smoothly.

It is adjusted very easily.
 It requires less repairs.
 It runs more easily.
 It is more durable.

Tubular Wheelbarrows.

THE BEST AND CHEAPEST IRON BARROW FOR MINERS, FARMERS, MILLS,
FOUNDRIES AND SMELTING FURNACES.

These Barrows are made entirely of Iron. The frames being made of Tubing, and the Tray, Wheels, Legs and Braces of Wrought Iron, thus securing the combination of great strength, durability, and comparative lightness.

They are not affected by the weather, and are especially adapted for hot climates.

These Barrows are made in the most complete manner possible, and they can be taken apart and packed in a more compact manner than any other Barrow, and do not require skilled labor to put them together.

Should any of the parts become lost or broken, they can be duplicated at once.

10,000 of these barrows have been sold in California and Nevada, and in every case given complete satisfaction.

All Steel Wheelbarrows.

Pattern A. (Steel)

No. A.—Made of No. 15 steel; capacity, three cubic feet of earth. Suitable for light work, as moving loose earth, sand, etc. Weight of barrow, 55 lbs., each, . . . \$ 12 00

No. B.—Made of No. 14 steel; capacity, same as No. 1, but for heavier work, in quarries, mines, etc. Weight of barrow, 60 lbs., each, 14 00

Canal Barrows.

NEWMAN'S Iron Wheel, per dozen,
 " Wood Wheel, per dozen,

\$ 36 00

40 00

Champion, Iron Wheel, per dozen,

\$ 45 00

Bent Leg, Iron Wheel, per dozen,

\$ 45 00

This cut represents our Patent Bent Leg Barrow knocked down for shipment ; it contains wheel, legs, and in fact all the parts connected with the Barrow—it being in so small a package we secure the lowest rates of freight. It is a favorite with the Jobbers, as the Barrow being all in one package, there can be no error in reshipping. Weight, 40 lbs. each.

Directions for Setting up Bent Leg Barrows.

Remove the tray from handles by unscrewing the nut holding the tray, remove wheel and legs, set the tray in place on the handles, bolting it through the bottom of tray with the short $\frac{1}{2}$ inch bolt. Bolt the legs in place, adjust the wheel and go ahead.

Patent Sectional Parabolic Head-light.

THE CHEAPEST IN THE MARKET.

It has been in use for the past nine years, and given general satisfaction. It is well adapted for lighting Mills, Mines, Hoisting Works, Warehouses, Streets, etc.

The front view of the Reflector is of octagonal shape; it is corrugated to diffuse the light, and to prevent dazzling the eyes. The vertical section is a parabolic curve with a small focal reflector. The reservoir, burner and chimney are inserted through the lower and top sections of the Reflector. The body or outer casing of the Head-light has been modified from the above cut, and is now made square; thus the glass in front is a square piece, and is set in the door frame, and can easily be replaced.

Width in Front.	Depth.	Height.	No. of Burner.	Price Each.
12 inch.	8 inch.	19 inch.	2, Flat or Argand.	\$ 5 25
16 "	11 "	24 "	3, " "	10 50

Patent Hydraulic Mining and Locomotive Head-light.

The best in the market. It is provided with a new style of head-light burner, which concentrates the flame to a white intense light—of great importance in a true parabolic reflector. The chimney extends far below the flame, with nothing to intercept the rays, while the Eastern head-light burner has a black button in the very focus of the reflector, also a cone, and the chimney-holder partly covering the flame. The Reflector is spun out of one piece of silver-plated metal, and is a true parabola, which is the only shape that will reflect all the rays in parallel lines—which is required in order to have a strong light at a distance of two or three hundred feet, as is required for hydraulic mining. But as light is often required to be strongest near the top of a gravel bank, in order to save the expense or inconvenience of a trestle-work to raise the lamp, this patent Reflector has a regulating attachment which allows the light to be reflected up or down, as desired, while the oil reservoir and burner will always stand on the same level. The

glass in front is held between two brass rings, the inner one removable, so that the glass may be replaced without soldering or plastering. These brass rings also serve to heat the glass equally all around. A place is also provided to receive a square piece of glass in case a round one is not at hand. In order to make it convenient to ship to retired mining-places, they are expressly built as compact as possible, thus the 20½ inch by 36x16, gives a more brilliant light, having the same size burner, than the large, bulky, heavy, and expensive old style locomotive head-light.

Description of Sizes on Hand.

Larger and smaller made to order.

Width in Front, Inches.	Height, Inches.	Depth, Inches.	Weight, Pounds.	Diam. Wick, Inches.	Height Flame, Inches.	Consume 1 Gallon Oil in hours.	Price Each.
20½	36	16	42	1½	3¾	24	\$ 50 00

14½	25	12	25	1	3¼	48	30 00

Patent Side Lanterns.

Mostly used to hang against the wall, but all having wire handles. The smaller sizes make a powerful hand lantern. These lamps are of the cheapest patterns, have glass on three sides, and a tin back on the fourth, provided with a silvered glass reflector. The glasses are secured by simply setting the lower edge into the groove prepared for it at the bottom of the lantern, while just above, on the top, are removable hook strips, which are then bent over the glasses. These patent hook strips can be replaced and any number added without soldering or other skillful labor. They may be bent short or long; will not tear off, and will allow all the elasticity required to give towards the glass to let it set free from strain and to allow it to expand from heat or cold. The Patent Chimney Top is also of great importance in a lantern. It is made removable not only for cleaning the soot which might gather in the chimney-top and would stop the draft, but also for the regulating of said draft. Thus when used in a windy place it should be screwed down so that the wind going through the perforated border of the outer chimney will strike against the collar or contracted end of the inner chimney, and will then force its way upward and out on the opposite side, but when the lantern is used indoors or under shelter, it is the best to have the top raised up to allow more ventilation.

Central Reflector Lamps.

Patented Sept. 6, 1870; Reissued Sept. 9, 1879; Reissued Feb. 8, 1881.

These lamps have now been in use for the past ten years all over the Pacific Coast—in Mills, Mines, Hoisting Works, Stores, Warehouses, Railroads, Stations, Wharves, Stables, Yards, Streets, etc., and have given the best satisfaction, both in brilliancy and economy. They are made of various styles, but the two illustrated above are the most in use, one being tapering towards the bottom while the other is square down to the bottom. Both have the peculiar arched tapering roof over each side and glass, also the curved corrugated reflectors, the difference in the two being in the construction of said reflectors. The tapering lamp is made to reflect down and all

around that main portion of the light which otherwise would go up, and will leave no shadow underneath; such light is most desirable for working by. The square lamp has the reflectors so constructed as to reflect the rays of light almost parallel in every direction. The reflectors are corrugated to diffuse the light and prevent the dazzling of the eyes.

Hill's Triangular Hog Rings.

Coppered Wire.

Coppered Wire.

Coppered Wire.

The cuts above show the open Rings, which we make of three different sizes, both of Coppered and Tinned Wire. One grip on the Ringer forces the beveled points of the Ring through and closes it in the nose. Being the shape of the end of a hog's nose, when closed, it is not liable to catch on anything and be torn out, or to collect and carry trash.

Per hundred, 50 cts.

Nos. 1, 2, and 3, per box, 100. 1 dozen boxes, 1,200 Rings in 1 package.

Hill's Improved Hog Ringers.

Closes all sizes of Hog Rings. Made of best Malleable Iron. Closing of the Jaws is regulated by the thumb-screw in the handle.

Per dozen, \$ 9 00

Hill's Hog Tongs.

Made of best malleable iron. Japanned and painted. Stock-raisers are finding the Hog Tongs an indispensable aid in ringing Hogs, as the snout can be held still while placing and closing the Ring. Any size hog can be held with them.

The CV Gopher Trap.

NEVER FAILS TO CATCH AND KILL.

No Farmer should be without the Traps; they are sure to catch Gophers, Squirrels, Moles, Etc., whenever they come near it.

DIRECTIONS FOR SETTING.—Scoop out the gopher-hole; then set the trap by pressing down the spring, and placing the lever (A) over the fulcrum (B) and into the pin-hole on the pan (C). Then shove the trap well into the gopher-hole, covering up the points thoroughly. Set lightly, so that the dirt, when shoved out by the gopher, will spring the trap.

Price, per dozen,	\$ 5 00
-------------------	---------

The California Gopher Trap.

Is the simplest, strongest, and cheapest trap in the market. It has been in use for the last twenty years, and the demand for it increases every year.

Price, per dozen,	\$ 10 00
-------------------	----------

The Newhouse and The Hawley and Norton Traps.

No. 0.—The Rat Trap; spread of jaws, 3½ inches; strong enough to hold Muskrat; with Chain, per dozen, \$4.25; no chain, per dozen, \$3.25.

No. 1.—The Muskrat Trap; spread of jaws, 4 inches; adapted to capturing the smaller fur-bearing animals; with Chain, per dozen, \$4.65; no Chain per dozen, \$3.50.

No. 1½.—The Mink Trap; spread of jaws, 4½ inches; strong enough to hold the Fox or Fisher; with Chain, per dozen, \$7.50; no Chain, per dozen, \$6.00.

No. 2.—Fox Trap, with double spring; spread of jaws, 1½ inches; strong enough to hold an Otter; with Chain, per dozen, \$10.50; no Chain, per dozen, \$9.00.

No. 3.—The Otter Trap, double spring; spread of jaws, 5½ inches; with Chain, per dozen, \$13.75; no Chain, per dozen, \$12.00.

No. 4.—The Beaver Trap, double spring; spread of jaws, 6½ inches; with Chain, per dozen, \$16.50; no Chain, per dozen, \$14.50.

No. 4½.—Deer Trap, double spring; spread of jaws, 6½ inches; with Chain, per dozen, \$18.50; no Chain, per dozen, \$16.50.

No. 5.—Bear Trap; spread of jaws, 11½ inches; weight of each spring, 2 lbs. 10 oz.; weight of trap, 17 lbs.; suitable for taking the common Black Bear; with Chain, \$140 per dozen.

No. 6.—Bear Trap, large size; spread of jaws, 16 inches; weight of each spring, 6 lbs. 10 oz.; weight of Trap with chain, 42 lbs.; made throughout, except the pan, of wrought-iron and steel; strong enough to hold the Moose or the Grizzly Bear; with Chain, per dozen, \$280.

THE HAWLEY & NORTON TRAP is made under the same supervision, and by the same workmen, as the Newhouse, to which alone it is inferior. It is better finished, and in every way more reliable than other brands of cheap traps. It is growing in favor with the trade.

Both these brands of traps are sold from the same Price-list, but with different discounts.

Cheney's Improved Combined Anvil and Vise.

WITH ADJUSTABLE JAW.

No. 10, Face of Anvil, $4\frac{1}{2} \times 2$ inches; Jaws, $2\frac{1}{2}$ inches; wide and open, 3 inches, price,		\$ 3 50
No. 20, " $6\frac{1}{2} \times 3$ " " $3\frac{1}{2}$ " " 4 " "		4 50
No. 30, " $8 \times 3\frac{1}{2}$ " " 4 " " 5 " "		5 50
No. 40, " $8\frac{1}{2} \times 4$ " " $4\frac{1}{2}$ " " 6 " "		6 50

No. 10 is adapted for use of Jewelers, Amateurs, Boys, or any one who wishes a small, strong and convenient tool.

No. 20 is especially the Householders' Tool, and no family can afford to do without it. With a hammer, a few rivets and nails, you can at odd times, with the help of this, make such repairs as are constantly needed about every house; besides, it will furnish your boys a useful amusement and encourage them in the study of mechanics and home improvements.

Nos. 30 and 40, to hold wedge or other odd shaped articles, which is done by removing the steel pin, allowing the jaw to turn on its pivot, and accommodate itself to the shape of the article, the great convenience of which will be appreciated by any one who has tried to hold a wedge in a common vise.

Buffalo Portable Forges.

Forge No. 0. Price, \$50.00.

Height, 30 inches; size of hearth, 28 x 40 in.; fan, 12 in.; weight, 250 lbs.

Forge No. 0 is especially adapted for heavy blacksmith work, having a large fire-place, with sufficient blast to do heaviest kind of work; will heat $3\frac{1}{2}$ to 4 in. round iron in ten minutes.

This forge is a general favorite with carriage and wagon blacksmiths. It economizes space and time, and is much more convenient and effective than a brick forge and bellows.

Forge No. 1, with Hood. Price, \$40.00.

Forge No. 1, height, 29 in.; fan, 8 in.; hearth, 21 x 27 in.; weight, 145 lbs.

Forge No. 1 will produce a welding heat on iron 2½ inches in diameter in five minutes, and on heavier iron if required. It is especially adapted for the use of machinists, railroad shops, etc.

These are the only portable forges that have no dead center or back motion, and which have the easy motion of operating same by lever, which does not confine the operator close to the fire, as all others do.

Forge No. 2. Price, \$42.00.

Forge No. 2, closed hood, same capacity as Blacksmiths Forge No. 1; weight, 155 lbs.

On Forge No. 2 we place a "closed hood," which is strongly made of sheet iron, completely inclosing the fire-place, and having in front a large double door for manipulating the fire, etc. The closed hood prevents the escape of sparks or fumes and smoke, and is especially adapted to the use of jewelers, dentists, locksmiths, tinsmiths, etc.; also for annealing or refining metals.

Forge No. 3. Price, \$36.00.

Forge No. 3, height, 29 in.; fan, 8 in.; hearth, 21 x 27 inches; weight, 140 lbs.

Forge No. 3 has four drop handles for convenience of moving from place to place, with deep fire-place. It is especially adapted for the use of boiler-makers, iron bridge and ship builders, and a great favorite for railroads, etc.

We guarantee all our Forges and Blowers to give perfect satisfaction in every respect. More durable and economical than any other made.

Buffalo Portable Forges.

Forge No. 4, with Hood. Price, \$27.00.

Forge No. 4, half-open hood, height 33 inches; size of hearth, 18 inches diameter; weight, 75 lbs.

Forges Nos. 4 and 5 will produce a welding heat on iron one and a half inch in diameter in five minutes. Heavier work can be done on either of these Forges; but on account of their size of fire-place and general capacity, they are specially recommended for work specified.

This Forge is peculiarly adapted for use of machinists, model-makers, plumbers, tinsmiths, and manufacturers in general, for heating and tempering tools of all kinds.

Forge No. 6. Price, \$30.00.

Forge No. 6, closed hood, same capacity as Blacksmiths' Forge No. 4; weight, 80 lbs.

This Forge has closed hood, with large double doors, and is especially adapted for the use of jewelers, dentists, locksmiths, planing-mills, etc.

The most durable, compact and effective Portable Forges in use, and needed by every farmer, boiler-maker, miner, dentist, jeweler, plumber, ship-builder, bridge-builder, steamboat and iron worker, etc., throughout the country.

Forge No. 5. Price, \$24.00.

Forge No. 5, height, 33 inches; size of hearth, 18 inches diameter; weight, 70 lbs.

Forge No. 5, same capacity as No. 4, and is especially adapted for the use of boiler-makers, repairers, tank-builders, miners and prospectors, being light, strong and compact. It is easily carried around the country.

Forge No. 7. Price, \$16.00.

Forge No. 7—Height, 15 in.; hearth, 15 in. diam.; fan, 6 in.; weight, 40 lbs.

Case, 19 in. long, 19 in. wide, 19 in. deep; weight, 15 lbs.; price, 75 cents net.

This Forge is especially intended for light work. Being very compact and light, it can be easily moved about. It has short legs; so, when used, it is to be set on a box or bench, and will produce a welding heat on one-inch iron in five minutes. Heavier work can be done, if desired.

Forge No. 7 is especially adapted for miners and prospectors. Our case for same has ample room for carrying the necessary blacksmith's tools, and the whole outfit can be easily packed on a mule's back for transportation.

We guarantee all our Forges and Blowers to give perfect satisfaction in every respect. More durable and economical than any other made.

Buffalo Portable Forges.

Forge No. 8. Price, \$18.00.

Forge No. 8—Height, 15 in.; hearth, 15 in. diam.; fan, 6 in.; weight, 50 lbs.

Forge No. 8 has half-open hood, same capacity as No. 7, and is especially adapted for tinsmiths, jewelers, locksmiths, farmers, etc.

Farmers will find this a very valuable tool, enabling them to make their own small repairs, saving much time and money.

Forge No. 9. Price, \$20.00

Forge No. 9—Size of hearth, 15 in. diam.; fan, 6 in.; weight, 55 lbs.

Forge No. 9 has entirely closed hood, with large double door in front and single door in rear, so that it can be opened at front and rear.

It is especially intended for charcoal fires, the closed hood preventing the escape of sparks, smoke or gas, when starting the fire. Same capacity as No. 7.

Blacksmiths' Hand Blowers.

(Tuyere same as shown in cut of No. 3 Blower.)

Blower No. 2. Price, \$32.00, with Tuyere complete.

Blower No. 2. Price, \$30.00, without Tuyere.

Blower No. 4. Price, \$36.00, with Tuyere complete.

Blower No. 2—Size of fan, 14 in.; height, 35 in.; length, 32 in.; weight, 150 lbs.

Blower No. 4—Size of fan, 17 in.; height, 35 in.; length, 35 in.; weight, 200 lbs.

Blower No. 2 is especially designed for all ordinary blacksmith purposes. If used with our improved Tuyere, is guaranteed to produce a welding heat on 3-inch iron in five minutes, and on 4-inch iron in ten minutes; heavier work can be done, if desired.

Blower No. 4 is especially designed for extra heavy blacksmith purposes, and flange fires in boiler shops.

Upright Blower No. 3. Price, \$25, with Tuyere complete.

Upright Blower No. 3. Price, \$23, without Tuyere.

This Blower is of an entirely new design. The construction is so simple, the operation so easy, and the speed and efficacy so great, as to be truly marvelous. It gives a strong, steady blast, with but little labor, and will heat quicker than any bellows or blowers made. It is operated by means of a lever which has the swivel motion, most natural to the blacksmith, and which does not tire him. It takes less room and has all the advantages of the old-fashioned bellows, in that the blast continues for some moments after the lever is at rest. In short, it is the best, cheapest, most effective, durable and positive Blower made, and is guaranteed to give perfect satisfaction in every respect, if used with our Tuyere.

The Worcester Self-feeding Drills.

No. 0. Drills from $\frac{1}{16}$ to $\frac{3}{8}$ inch hole.
Length, 26 inches. Weight, 30 lbs.

The above is fitted for a No. 2 Beach Chuck, or can be used without.

Price, \$20.00.

The Chuck would be extra.

No. 1. Drills from $\frac{1}{8}$ to $\frac{1}{2}$ inch hole.
Length, 42 inches. Weight, 98 lbs.
Price, \$28.00.

Price with Pulleys for power, \$31.00.

No. 13. Drills from $\frac{1}{4}$ to 1 inch hole.

Price, \$34.00. Length, 44 inches. Weight, 120 lbs.
Price arranged for power with Pulleys, \$37.00.

This machine has nearly a continuous feed which may be quickly adjusted by a thumb-screw to three rates of speed. A fast or slow motion may be given the drill by changing the handle from shaft (A) to shaft (B), as desired by the operator. By this arrangement the capacity of the drill has been increased nearly one-third. Will drill to the center of a 10-inch circle.

No. 2.

Length, 54 in. Weight, 160 lbs. Price, \$48.00.

No. 2 is similar to No. 13, and has all the late improvements. The Swing Table, as applied to these machines, will be found useful in many ways, and much more convenient than the old method of driving them in and out with a hammer, thereby running the risk of breaking the foot-piece. It is out of the way when not in use, and may be quickly swung into position when wanted. Will drill to the center of a 15-inch circle.

Yount's Improved Blacksmiths' Tire Upsetter.

Cheap, durable, strong.

Price, each, \$ 25 00

This excellent machine meets with universal favor, pleases everybody, and is the most powerful, most durable, and most useful Upsetter for all kinds of Tire, in use.

It will upset Tire from one-quarter inch wide to a heavy log wagon Tire four inches wide and three-quarter inch thick, at one heat.

It operates upon the tire when lying horizontally, which is vastly easier and more convenient for the smith, and better on the tire, than the vertical machines. It can be fastened down firmly by two bolts to an ordinary bench, which may be moved to any place, to suit the workman. It is operated with rapidity and ease, does not mar the edge of the tire, but grasps it on the inside, and which, when shrunk, can be instantly released. By its peculiar construction it is less liable to kink the tire than any other machine ever introduced. When preferred, it can be bolted to a post and used vertically. *It will upset Bar-iron or Iron Buggy Axles from one and a half inch down.*

INSTRUCTIONS: In using the Tire Shrinker it is necessary to bring the iron to a white heat. Heat as little of the tire (lengthwise) as possible. After placing the iron in the Shrinker, press the clamps against the tire, and bear down on the lever enough to bring the tire to the circle in the Shrinker. After getting the tire set to the Shrinker, open one clamp, throw up the lever, then close the clamp against the tire, bearing down on the lever; and in case the tire is not shrunk as much as desired, raise the lever and try again. *One heat* is all that is required to shrink the iron an inch or more. In case the iron crimps in shrinking, tap it a few times with a hammer, till it is driven against the curved sides of the Shrinker. Bolt the Shrinker securely to a bench before trying to use it.

Tuyere Irons—*Continued.*

"PERFECTION."

Patent Improved Self-cleaning Bottom Tuyere.

It is easily connected, by merely putting it over the nozzle of your Bellows or Blast Pipe. It is ready for use. No water; no slide; no bolts; no crank; no rod. It will never burn out or choke up, and is the only Tuyere suitable for general Blacksmithing for Bellows or Blower.

There are four sizes, and two grates to each, for large and small fires.

Per pound,

cts.

Roberts' Lathe and Planer Chuck.

JUDSON'S PATENT.

This cut of a $\frac{1}{2}$ section of the nut and jaw shows the special feature of this Chuck in the angles of the nut and jaw, by which, when the jaw comes against a piece of work in the Chuck, the pressure of the screw towards the center also presses the jaw firmly against the face of the Chuck, so the jaw can never tip up, thus holding the work firmer than any other Chuck. We make all sizes independent Jaws, and from 6 to 15 inch with Universal Jaws. The screws in the Universal Chuck are geared together in the center, thus making the only Universal Chuck with a direct motion. The working parts are made of steel and wrought iron. The jaws on all Chucks above 6 inch are reversible.

15 "	35 00	30 "	100 00
36 in.,			\$ 150 00

Every Chuck fully warranted, and sent out on trial.

Roberts' Engine Governor.

With Adjustable Valve; Suteliffe's patent; the most sensitive Governor in use.

Size of Valve, or Diameter of Steam Pipe.	Finished.	Plain.	Diameter of Cylinder suitable for.
½ inch, each,	\$ 17 00	\$ 15 00	2 to 3 inch.
1 "	17 00	16 00	2 " 3 "
1½ "	20 00	18 00	3 " 4 "
2 "	23 00	20 00	4 " 5 "
2½ "	28 00	24 00	5 " 7 "
3 "	33 00	28 00	7 " 9 "
3½ "	44 00	38 00	9 " 12 "
4 "	54 00	48 00	12 " 14 "
	62 00	53 00	14 " 17 "
	71 00	61 00	17 " 20 "

The speed for each Governor is stamped on it.

The valve in this Governor is hollow and turned to fit the chamber, and suspended by a brass rod, the sides of the chamber forming a seat for the valve, thereby avoiding all friction. The steam passes through into the valve and then into the steam-chest, preventing the cutting of the seat, as in other Governors. The balls have a hole bored through the center, then counter-bored, to admit a spiral spring. A steel pin is turned with a collar on the outer end, so that it may fit loosely each end of the balls, and fastened to the lower sleeve, permitting only of a lateral motion to the balls, due the centrifugal force. The balls are connected to the top sleeve by brass strips, which give a direct motion to the valve below. At the top is a hand wheel and jam nut, by which the valve may readily be adjusted to regulate the speed of the engine while the Governor is in motion. These Governors are warranted to give perfect satisfaction, and are sent out on trial.
